

Curved Shower Rod Systems

Curved Shower Rods are offset by 9 inches and greatly increase the space available behind the shower curtain. Compared to traditional curved shower rod styles with a 6-inch offset, Brey Krause's design adds 105% additional shoulder & elbow room from front to back (see diagram below).

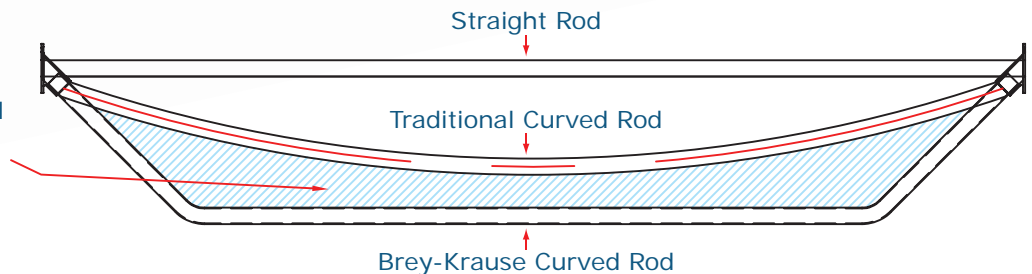

The bars are fabricated from 1-inch diameter 18 gauge (.049 wall) stainless steel tubing, and available in bright stainless, satin stainless, and several powder-coated finishes.

6-inch offset rods are also available by request. Please contact the factory for more details.

Note: The shower rod and flanges are sold as one unit.

The Brey-Krause Curved Shower Rod provides 105% more shoulder and elbow room than traditional curved shower rods.

Flange Styles:

S-1030-SS

Part number specifies 1" diameter, 18 gauge curved shower rod with 9" offset and pair of exposed, bent mounting flanges as shown above (hardware not included).

S-1025-SS

Part number specifies 1" diameter, 18 gauge curved shower rod with 9" offset and pair of concealed, bent mounting flanges as shown above (hardware not included).

S-1020-SS

Part number specifies 1" diameter, 18 gauge curved shower rod with 9" offset and pair of exposed, slash-cut flanges as shown above (hardware not included).

S-1010-SS

Part number specifies 1" diameter, 18 gauge curved shower rod with 9" offset and pair of adhesive mount, slash-cut flanges as shown above.

Shower rods and flanges available in satin stainless (SS), bright stainless (BS), and several powder-coated colors.
